PROFILE

Computer Science graduate (BSc, 2025) who builds complete, tested software end to end: **AI-powered apps** on the Claude API, **SQL-driven backends and data dashboards**, **full-stack web and mobile apps**, and **network security monitoring in Python**. I turn messy real-world problems into working, well-documented systems, a habit sharpened by nine months of hands-on technical support. Fluent in English (C2) and Greek (native).

SKILLS

- **Programming:** Python, TypeScript, JavaScript, SQL, PHP, C++, HTML/CSS
- **Data & AI:** SQL analysis (joins, CTEs, recursive queries, EXPLAIN tuning), dashboards and charts, CSV/JSON data pipelines, Claude API (tool use, structured outputs, image input)
- **Web & Mobile:** React, Next.js, Node.js/Express, Laravel, React Native (Expo), REST APIs
- **Databases:** PostgreSQL, MySQL, SQLite, Oracle basics
- **Security:** Network traffic analysis (Scapy), Suricata, Wazuh, MQTT, Modbus/TCP, IEC 62443, MITRE ATT&CK, OWASP web vulnerabilities (120+ PortSwigger labs)
- **Tools:** Git/GitHub, Docker, GitHub Actions CI, automated testing (Jest, Pest, Vitest, pytest)

PROJECTS

Personal Home Helper: mobile app with an AI assistant [GitHub](#) *Claude API · React Native*

- AI assistant on the **Claude API** with **19 tools** that read and update app data, plus memory, photo understanding (receipts, meals), daily suggestions and weekly plans.
- Eight connected modules (food, fitness, inventory, shopping, budget, chores, planner, weather), spending forecasts from past data, Wear OS companion; **230+ automated tests**.

Home Helper API: data backend and analytics dashboard [GitHub](#) *Laravel · MySQL · React · Oracle*

- REST API for **20 data modules** with an offline-first sync engine; SQL insight queries (spending, health, chores) tuned with EXPLAIN ANALYZE on a **500-household benchmark**.
- React dashboard with charts, scheduled jobs (budget alerts, weekly summaries), Oracle backup/restore lab and CI running **280+ tests**.

IoT Security Monitor [GitHub](#) *Python · Scapy · SQLite · Flask*

- Captures and parses network traffic, builds a device inventory and behaviour baseline, and raises alerts from **9 detection rules** (port scans, ARP spoofing, unusual traffic, MQTT abuse).
- Logs to SQLite/JSONL/CSV with a Flask dashboard; Docker lab with recorded attack scenarios and **88 tests**.

Full-Stack E-Commerce Application [GitHub](#) *Next.js · Express · PostgreSQL*

- Catalog, cart, checkout and order history with secure login (bcrypt, JWT in httpOnly cookies) and an admin role.
- **Stripe** payments with server-side price checks and webhook order fulfilment; Dockerised PostgreSQL.

OT/ICS Cybersecurity Lab [GitHub](#) *Python · Suricata · Wazuh*

- Simulated industrial plant (PLC over Modbus/TCP) with segmented networks and a firewall between zones.
- Detection rules in Suricata and Wazuh for attack scenarios, mapped to **IEC 62443** and **MITRE ATT&CK for ICS**.

EXPERIENCE

Technical Support Representative, Cosmote Telecom (via Mellon) *Nov 2025 – Aug 2026*

- Diagnosed and resolved internet, network, hardware and software issues for customers by phone in a fast-paced environment.

EDUCATION

BSc in Computer Science, University of Western Macedonia *2019 – 2025*

CERTIFICATIONS & LANGUAGES

- **Certifications:** IBM Full Stack Software Developer (Coursera, 2024), Cisco Introduction to Cybersecurity and Cybersecurity Essentials (2022), freeCodeCamp Responsive Web Design (2024)
- **Languages:** Greek (native), English (C2), German (B1)
- **Volunteering:** Judge, Robotex robotics competition (2024)
